

Seminar:

Explore the Universe of the Cell :

Cell Imaging and Analysis Technologies from GE Healthcare Life Sciences

Please join us for a free seminar which will show how automated cellular imaging and analysis techniques can positively impact a range of cellular research areas.

The very latest developments in HCA technology will be discussed and example applications will be presented including: siRNA functional genomic cell cycle studies as well as toxicity assays for both neuronal applications and for stem cell derived cell lines for cardiomyocyte investigation. HCA applications from organelles through to whole organisms will be covered.

Date: 27th Abril

Time: 10:00

Venue: IIS La Fe. Torre A

Room: 4-5 planta baja.

Presented by: Mark Harvey
Cellular Imaging Specialist
GE Healthcare

We will also explore the power of high resolution and super resolution microscopy and show how sub-diffraction limited imaging can open up new insights into the discovery of biological complexity.

We look forward to seeing you and answering any questions you may have on this topic.
